NEW in the item building kit system: Hinge with grooved ball bearings for dynamic applications

The new item swivel bearing 8 40x40 enables continuous low-friction and wear-resistant pivoting. Movements can be easily generated on the basis of circular motions such as, for example, opening movements for heavy doors and hatches and changes in the direction of movement in automation installations by means of the swivel bearings, which feature two sealed grooved ball bearings.

Further advantages of this innovative new product by item, which is now available alongside the established item hinges with slide bearings, are the fact that it's maintenance-free and can be easily assembled within the profile design of the MB building kit system.

The item Industrietechnik GmbH from Solingen is the developer and supplier of the MB system module, a system, which provides individual solutions for the manufacture of industrial production equipment. The module focuses on aluminium profiles, harmonising connection technology and diverse functional components.
