### *Display, Instruction, Training* **item Display Holder**

Whether technical drawings on the workbench, work instructions at the production workplace or the menu in the canteen – they all need to be easily readable, protected and easy to exchange. A modular Display Holder from the item MB Building Kit System now makes this a reality. It is now possible to make informative displays and notice boards in any required size from the Building Kit System. The designer is free to decide whether the copy is to be clamped at one edge, framed all round, protected under a transparent cover or left completely open.

The item Display Holder consists of two aluminium Profiles which, together with any suitable 2 mm thick surface, form the main frame. The Support Profile is screwed to the Panel Element, while a hinged Lid Profile clamps the copy in place or releases it.

The main point about this frame structure is that it is now possible to construct any size from an A4 clipboard to a wall-filling display board in your training facilities. If mounted on a suitable mobile base, made from the item Building Kit System, it is even possible to make mobile display boards.

The Display Holders are offered as ready-made frame units in A4 and A3 sizes. In addition, it is simple to apply item's design principles to make one's own individual Display Holder.

## Product benefits

- Safe keeping for paper copy in production and training
- also suitable as a notice board frame
- simply open up the spring-loaded Lid Profile to change the document
- Clamping force is easily adjustable by simply changing the number of springs
- use Clip 8 St to attach to profile grooves 8
- can be made up to any size (from clipboard to wall display size)
- as enclosed frame structure or Clamp Strip
- Rear wall material (2 mm thick) can be any suitable material (steel sheet, aluminium sheet, plastic)
- with a frame structure, can be used as a wall-mounted or mobile display
